

Recd. Oct. 21. 5.

And. Dec. 30th

Weymouth to London  
Sept 4. 1874.

My Dear Dr Torrey

I have sent to Dr Borth for you a good  
package of seed plants which I hope will be acceptable  
to you - and the sixth part of Britton's Labiate.  
I have also enclosed in a box to Prof. Beck of Albany  
a copy of my *Pisces* (not *Necus*) *Platanus*, which  
has not the German Botany all in a star.

I am now proceeding with the 4th part of  
my *Orchids* - but I am at fault for  
wanting more American species - and I am  
indeed to put you to the expense of the other, less  
to announce to you the above disputation than to  
beg you to send me or get me if to my job, speci-  
mens of the *Orchids* named on the other side. Now  
all this time I am paralyzed. Some of your cor-

respondents might help you when I can do so  
to success for yourself. I should be glad to  
get them, if possible, by the first opportunity  
in the mean while pray believe me

Yours faithfully

Wm Lindley

I have just brought into the world *Ladies Botany*  
as an attempt to teach *Ladies the Natural System*.  
And am occupied with new editions for the two  
introductions which will I hope be very much  
improved. To the *Natural code* I shall add  
a complete list of genera.

GARDEN.

My Dear Dr Torrey

Allow me to introduce  
to you Dr Daubeny, Profes-  
sor of Chemistry & Botany  
in the University of Oxford,  
and my very particular  
friend. I shall be ex-  
tremely obliged to you  
for any civilities you can  
show him

Yours truly  
John Lindley

Dr John Torrey  
Prof. of Botany  
and  
New York
